

DESIGN SPECIFICATION: DDO GEAR OPTIMIZER REDESIGN

This document details the comprehensive redesign of the DDO Gear Optimizer interface. The goal is to transition the application from a utilitarian, spreadsheet-like layout into an immersive, highly functional "dark mode" dashboard that aligns with the high-fantasy aesthetic of Dungeons & Dragons Online.

1. Core Design Philosophy

The redesign focuses on three pillars:

- **Immersion:** The UI should feel like a tool found within the game universe (e.g., an artificer's workbench or a wizard's desk). Materials should evoke stone, vellum, gold, and arcane energy.
- **Consolidation:** Minimize tab-switching. The redesign utilizes a singular, dense (but organized) dashboard view, surfacing the most critical information simultaneously.
- **Visual Hierarchy:** Important data (set bonuses, missing items) must pop through contrast and color, rather than relying solely on text placement.

2. Color Palette Specification

The palette is grounded in dark, cool neutrals to reduce eye strain, accented by warm metallics and thematic status colors.

Void Black

#121212

App Background

Artificer Gold

#D4AF37

Primary Headers

Obsidian

#1E1E24

Panel Backgrounds

Dragon's Blood

#8E2B2B

Warnings /
Destructive

Carved Stone

#2D2D35

Borders &
Dividers

Arcane Blue

#3B82F6

Primary Actions

Aged Vellum

#E8E3D8

Readout Panels

Nature's Vitality

#10B981

Success / Status

Burnt Vellum

#2b271d

Dark Readout

Polished Steel

#A8B0BA

Secondary Text

3. Typography

Typography relies on a stark contrast between ornate serif fonts for headings (establishing the fantasy tone) and clean sans-serif fonts for data (ensuring maximum legibility).

HEADINGS & TITLES

Cinzel / Merriweather

Used for panel titles, set names, and primary navigation elements. Evokes age and authority.

BODY & DATA

Inter / Roboto

Used for all item stats, console outputs, and tables. Optimized for readability at small sizes.

4. Component Guidelines

4.1 Global Navigation ("The Belt")

- **Location:** Top of the viewport.
- **Style:** Replaces simple text links with a stylized "leather and metal" belt motif.
- **Items:** Icons (e.g., a cog for solver, a magnifying glass for search) accompany the text.
- **System Status:** The "System Ready" green dot is replaced by a glowing crystal graphic next to the main title.

4.2 Left Panel: Gear Sockets

- **Concept:** Move away from a standard list. Present slots (Helmet, Necklace, etc.) as physical "sockets" waiting to be filled.
- **Empty State:** Uses a subtle inner shadow and text like "Socket Empty" or "Engrave Relic" instead of "Empty Slot (Click to add)".
- **Filled State:** The item name is displayed in a distinct color based on rarity (e.g., Purple for Epic, Orange for Legendary), flanked by a small icon of the item type.

4.3 Center Panel: The Vellum Scroll (Summary)

- This area requires the most contrast to ensure complex data is readable.*
- **Background:** Uses the *Burnt Vellum* (#2b271d) color to separate it from the main interface while keeping it dark mode compliant.
 - **Set Bonuses:** Do not just list them. Use small graphical pips (e.g., 2/3 lit pips) to quickly show how many pieces of a set are active.
 - **Filigrees:** Grouped tightly by weapon/artifact, using a slightly smaller font size to save vertical space.

4.4 Right Panel: Console & Trove

- **System Console:** Styled like an arcane terminal. Font should be monospace (e.g., Fira Code). Subtle scanline or glowing effects can be applied via CSS.
- **Owned Items (Trove):** A condensed table view. The "Filter by name..." bar is prominent, stylized with a glowing bottom border when focused.

5. Layout Structure (Dashboard)

The new single-page dashboard layout consolidates the previously separated tabs into a single unified view.

ZONE	REPLACES (OLD TABS)	PRIMARY FUNCTION
Top Bar	Global Header	Navigation, Global Status, Title
Left Column (25%)	Gearset Editor	Primary equipment socket interaction and assignment.
Center Column (45%)	Summary Breakdown / Filigrees	Vellum scroll view detailing set bonuses, stats, and filigree status.
Right Column (30%)	Item Search / Owned Items / Console	Inventory management, search filtering, and system readouts.
Bottom Drawer	Auto-Solver / Config	

ZONE	REPLACES (OLD TABS)	PRIMARY FUNCTION
		Collapsible panel for deep configuration (Build Type, Stat Priorities).

6. Interaction Details

- **Hover States:** Interactive elements should brighten slightly (e.g., moving from #2D2D35 to a lighter gray) and apply a subtle inset shadow to mimic physical pressing.
- **Modals:** When clicking an empty socket, the item selection modal should blur the background (backdrop-filter: blur) to maintain focus, using the *Obsidian* color for the modal body.
